Multimodal RAG Test Document

This sample document contains both text and an embedded infographic image. Use it to test the notebook workflow that extracts PDF text and embedded images, creates CLIP embeddings, retrieves relevant content, and sends retrieved evidence to a vision-capable model.

Text facts for retrieval: Multimodal RAG can combine textual evidence with visual evidence. In the example architecture, documents are preprocessed, converted into embeddings, stored in a vector index, retrieved by similarity, and passed to an LLM for response generation.

Embedded visual: Multimodal RAG architecture infographic

Try asking: “Explain the architecture shown in the infographic.” or “What are the main benefits of multimodal RAG?”
